Cost Effective

When it's impractical to install a factory new compressor or repair an older unit, a guaranteed Gardner Denver Factory Remanufactured compressor bare is the perfect alternative.

Reliable

The key word is *"remanufactured."* All Gardner Denver Remanufactured compressors receive the same stringent processing as our new products. With over 70 years of successful remanufacturing experience, Gardner Denver is the standard.

Compressor bares are remanufactured to current factory specifications in our dedicated remanufacturing facility.

Quality

We first inspect and analyze all of the compressor components. Each part must meet exacting specifications to insure total compatibility and

reliable performance. Wear on even the smallest or least expensive part can be the weak link in your compressor. This weak link can cause costly problems. Because of this, wrist pins, compression and oil control rings, main bearings, connecting rod bearings, seals, filters, and gaskets are **automatically replaced** with genuine Gardner Denver factory new assemblies.

As needed, we also replace crankshaft, cylinders, pistons, and other potential wear items. Any parts that meet specifications are thoroughly cleaned, inside and out and warranted the same as new parts.

The Gardner Denver Alternative: *There Is A Difference!*

Performance

Prior to shipping, qualified technicians check and certify each unit during an extensive mechanical test. The compressor performance and all functions are gauged against original factory specifications. In effect, a Gardner Denver remanufactured compressor is like new when it leaves our plant.

Warranty

Each Gardner Denver Remanufactured compressor bare carries **a full one year warranty**. Don't Take a Chance—keep it Gardner Denver!
